About Mertech

Since our founding, more than 2,500 companies worldwide have rolled out successful projects based on our products and services.

What We Do

ISDBC Drivers

Mertech Data Systems is a leading provider of high-performance Index Sequencing Database Connectivity (ISDBC) drivers that provide connectivity and enable data migration between ISAM (Index Sequential Access Method) applications and SQL-based databases, including:

- Oracle
- MS SQL Server
- DB2
- MySQL
- PostgreSQL

Consulting Services

From custom web solutions using .NET, to a wireless application for warehouse management, or re-engineering a DataFlex application to better utilize SQL databases, Mertech offers top quality, reliable and affordable consulting services and expert knowledge of a variety of technologies including:

- Oracle
- MS SQL Server
- C/C++
- Etrieve/Pervasive
- Internet technologies including Microsoft .NET

About Mertech

Mission and Philosophy

The Mertech Mission

Advances in technology have transformed the way we work and communicate. Today, we acquire information and communicate with people from around the world in seconds. New technologies have opened the door to innovations in every area of human enterprise, delivering convenience along with new business opportunities.

At Mertech, we strive to lead in the innovation, development, and solutions that translate into new business opportunities for our customers. We consider ourselves an extension of our customers' development team and view our customer's success as our success.

Our Philosophy - Continuous Innovation

The biggest challenge for a software company is continuous innovation. The demise of innovative spirit is a precursor to a company's irrelevance in today's fast-paced IT market. Innovation is not only a market demand, but also a necessity for continued existence and relevance.

At Mertech, this philosophy drives our development efforts – as well as our endeavors into new and exciting products and solutions.

Our Growth Strategy

As part of our mission to constantly innovate, Mertech is continually developing new and exhilarating technology solutions to enable customers to compete efficiently in the global marketplace. Learn more about our latest innovations like the [Mvglobalcam](#) video streaming network and [Bugflex](#) issue tracking system.

Tech Tip

Generating DataFlex® Code to Restructure or Create Table Using Flex2SQL

Updating remote databases is a common occurrence for developers deploying their databases at multiple sites. The DataFlex® language supports commands that allow developers to restructure (or alter) table and index definition programmatically. This still holds true once the database is migrated to an SQL back-end using Mertech's Database drivers. However, Mertech takes it one step further. Through its migration tool, users can now perform complex restructure operations graphically
